MarketView® ExcelTools delivers both real-time and historical energy market data into Excel spreadsheets allowing users to customize and categorize data for intricate analysis.

Streaming Real-Time and Snapshot Quotes

Track your positions in real-time for instruments such as Crude Oil, Natural Gas, and Heating Oil, or watch the term structure of the market while trading. MarketView ExcelTools' real-time interface gives you access to all of your energy data as it is published, greatly reducing end-of-day reporting time over those vendors who only provide historical data access.

Historical Data

The historical data module allows you to embed deep historical market information into your spreadsheets

with automated data filling methods, units and currency conversion, as well as optional chart creation. Historical data is available on an intraday, daily, weekly, monthly, and seasonal basis.

Charts

Insert a historical data table on your spreadsheet and let ExcelTools automatically format the data as a chart. Choose from numerous time series (intraday, daily, weekly, monthly, seasonal, etc.) and from numerous chart types (bar, candlestick, volume, etc.).

MarketView® ExcelTools Unique Features and Advantages:

- Standalone component is easy to install via a web browser.
- Streams data utilizing Excel Real-Time Data (RTD) components (vs. DDE), for a fast, reliable, and robust interface.
- Real-time Options Analytics for five different options models.
- View and analyze your company's own proprietary data such as forward curves.
- Ability to work off line – if Internet connection is unavailable, data from last data pull will populate spreadsheet.
- Perform real-time currency and unit of measure conversion for both quote and historical data.
- Navigate exchanges quickly with the ExcelTools Symbol Tree and Favorites Bar.
- Analyze seasonal trends via ExcelTools seasonal table and chart displays.
- Create and access your User-Defined Formulas in both ExcelTools and MarketView Desktop.
- Access ISO (Independent System Operator) electricity/power data.
- New software upgrades happen seamlessly in the background.
- Receive historic data and quotes from dynamic languages such as VBA, VBS, JScript or Python.
